### Instrument Strategy

The Sygnum Tactical Crypto Allocation Strategy dynamically invests in Bitcoin, Ethereum, and Solana using a quantitative mid-term momentum model. Momentum strategies capitalize on trends, increasing exposure during upward movements and reducing it during downturns. Allocations are adjusted daily, with portfolio exposure ranging from 0% to 150% (BTC: 0–75%, ETH: 0–37.5%, SOL: 0–37.5%). This adaptive approach enhances returns in bull markets while mitigating downside risk in volatile environments. The strategy targets outperforming a benchmark portfolio (50% BTC, 25% ETH, 25% SOL) on a risk-adjusted basis (Sharpe ratio) across market cycles.

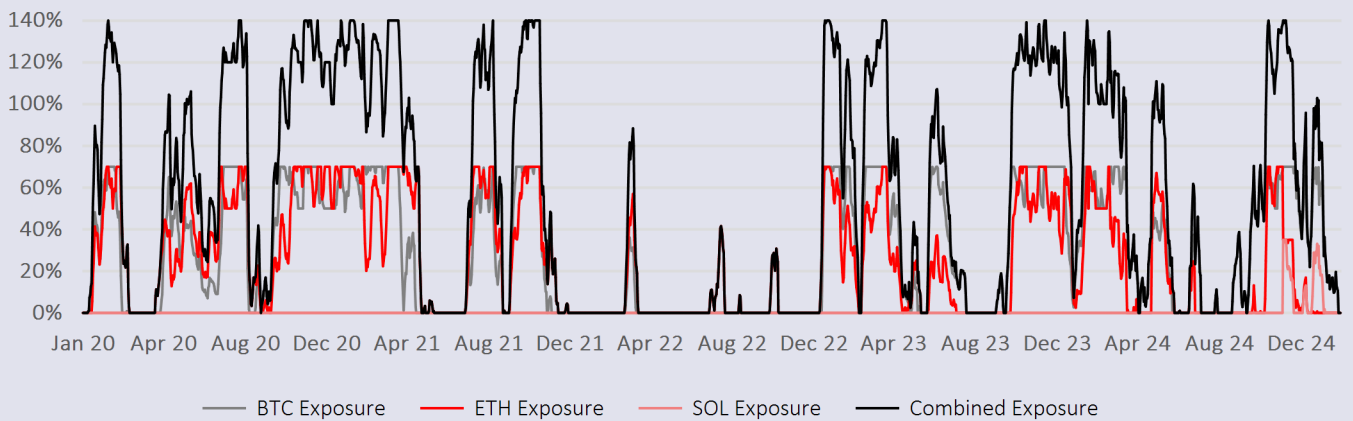

### Risk/ return profile

The product aims to achieve significant returns through capital appreciation of its token investments. Due to the directional market exposure of the strategy, the product has high volatility and drawdown risk. Through active management of the exposure based on the momentum signal the strategy aims to reduce drawdown risks compared to a benchmark of 50% Bitcoin, 25% Ethereum, 25% Solana.
